

For stomach and oesophageal cancers, delays from symptom onset to referral occurred for most patients with intervals over four times the recommended 2-week timeframe.<sup>1</sup>

**Act fast!**

**Trust your gut - Identifying upper gastrointestinal cancers in general practice** is a video-based activity designed to increase your awareness of symptoms warranting urgent referral for stomach and oesophageal cancers.

**START LEARNING >**

**GP module:**

**Nurse module:**

<https://www.arterialeducation.com/c/trust-your-gut-93>

## LEARNING OUTCOMES

By the end of this activity, you will be able to:

1. identify patients at high risk of oesophagogastric cancer and those who present with symptoms.
2. facilitate appropriate and timely referral of patients at risk of, or with suspected, oesophagogastric cancer for further investigations and/or specialist intervention.

## PANEL

**DR RALPH AUDEHM**

General Practitioner and Honorary Clinical Associate Professor  
MBBS, Dip RACOG

**MS MARY ANN JOHNSON**

General and Oesophagogastric Surgeon  
MBBS, FRACS
